

Assessments International Generative AI Statement

Updated July 29, 2026

Platform Use and Integration of Generative AI Statement

At Assessments International, we are committed to leveraging the power of generative artificial intelligence (AI) to deliver cutting-edge solutions that meet the unique needs of our clients. Generative AI will only be used where legally permissible, in compliance with this Privacy Policy, and in a manner which is consistent with our commitments and values.

Our assessment products are hosted on proprietary software that utilize advanced 3rd party Large Language Models (LLMs) and Foundation Models (FMs) within secure environments provided by Amazon Web Services (AWS). These technologies are integrated into our assessments and the application to ensure that our clients benefit from the latest advancements in generative AI while maintaining the highest standards of data security and privacy.

When interacting with AI in our application, users are informed about AI conversations and AI generated output. User inputs or model outputs are not shared with third-party model providers, nor are they used by AWS or external providers to train any models. The service supports strong security and compliance standards such as SOC, ISO, HIPAA eligibility, and GDPR, with validated controls through third-party audits. Some of the LLMs are open-source and some are proprietary, but the same security guarantees apply to all the models. Neither the data in prompts nor the output from the LLM will be stored or leave AWS's environment. This prevents model providers from accessing prompts or outputs, and isolates models within secure escrow accounts. The inputs to the LLM are only used to generate outputs that would be returned to the assessment and application.

Platform User Responsibility

Platform users are responsible for how they use and act on generated data and outputs. This responsibility includes ensuring that any use of the output complies with applicable laws, regulations, and ethical standards. Users should ensure that the output data does not infringe on the rights of any third parties, such as intellectual property or privacy rights.

Additional details regarding the use and integration of AI in our platform is available upon request. If you are a current or potential client and would like more information, contact us at solutions@assessmentsinternationalinc.com.
